

### **Putting your ideas together (Template 1)**

*Write down/sketch what you are interested in researching and why. After 10 minutes share it with the group to discuss.*

*While putting together what you want to research, think about:*

- 1. What is the issue/topic or problem that I want to do research about (at this stage it does not have to be very very specific)?*
- 2. Why do you want to do this research? What is your own personal interest and motivation to do it*
- 3. Why is this research important? who will benefit from this research (the who can be people but can also be the environment, a research discipline such as the discipline of Mathematics, it can be the economy, it can be systems like the NHS)?*
