

# How to create an asset in PebblePad.

Northumbria  
University  
NEWCASTLE

This guide will show you how to create an asset in PebblePad.

## Whats the difference between a resource and an asset in PebblePad?

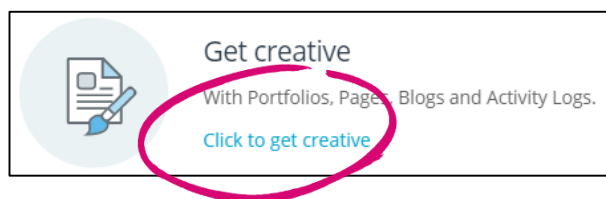

An asset has your personal content in it. You have full control over an asset, you can edit it and decide who has access to it.

A resource is a template used to create an asset. In PebblePad, there are text, image, video banner resources and more. For example, if you open a resource and add content into it, it will be saved as an asset.

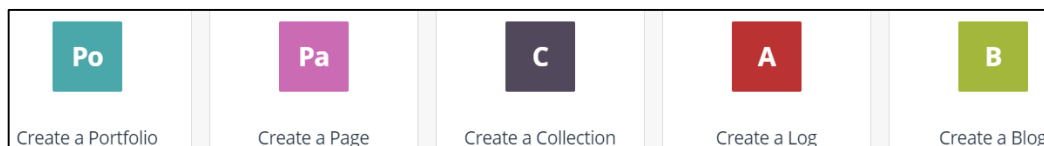

## Creating a PebblePad asset

1 Login into PebblePad.

Click **Click to get creative.**

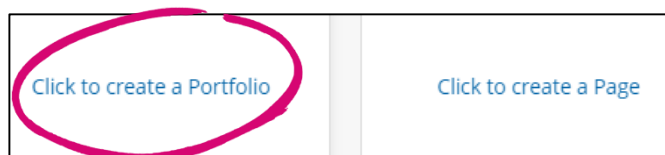

2 You will be presented with five types of assets that can be created:

- **Portfolio** – a multi-page presentation that demonstrates learning (Pages are added to the portfolio).
- **Page** – an individual page with media attached.
- **Collection** – a collection of assets which relate to one topic. These assets are 'tagged' according to the topic.
- **Log** – a log is a time recording of activity.
- **Blog** – a blog contains posts with media which are ordered chronologically.

3 Click on the **Click to create..** link below each asset to start creating an asset.

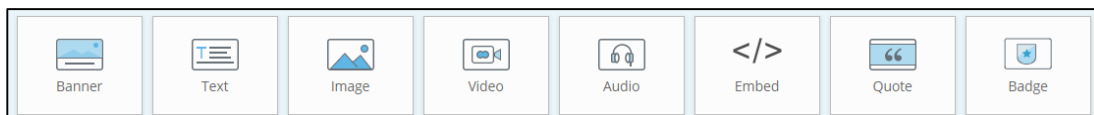

In this example, a **Portfolio** will be created.

- 4 Click the **Add Content** button to begin adding content to your asset.

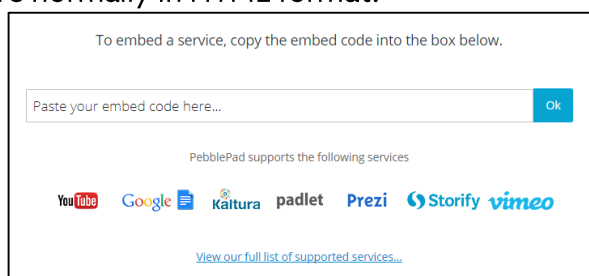

- 5 There is a range of different media you can add.

This is an overview of each media type:

- **Banner** – This will place a banner across the entire asset. By default PebblePad places a banner on the asset to begin with. You can choose from a range of available banners or upload your own.
- **Text** – The text function allows you to type in your own text and then format it.
- **Image** – Places an image on the asset. You can upload your own image, or use the asset store to upload any previously uploaded images.
- **Video** – Places a video on the asset. You can upload your own video, or use the asset store to upload any previously uploaded videos. YouTube and Vimeo videos can also be used.
- **Audio** – Places audio on the asset. You can upload your own audio, or use the asset store to upload any previously uploaded audio.
- **Embed** – Embedded code can be pasted here, which will embed the content into the asset. Many websites, such as YouTube supply embed codes. These are normally in HTML format.

- **Quote** – Places a large quote, blocked, in the middle of the asset.
- **Badge** – Places an Open Badge on the asset (this will have been previously earned by an Open Badge supplier). More information on Open Badges is available at: <https://openbadges.org/>

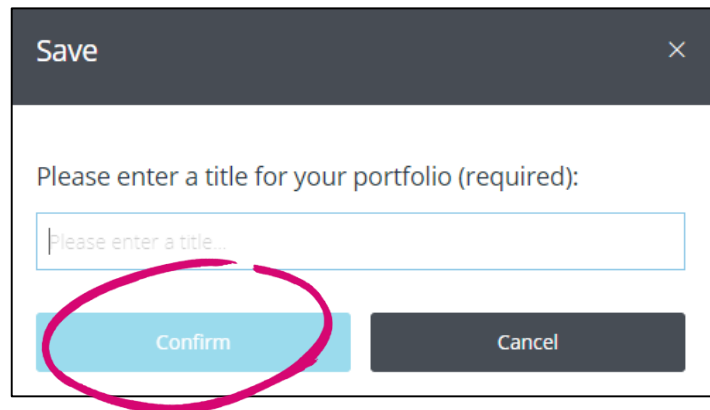

Each of these content items can be edited accordingly in order to support the development of your asset.

## Saving your asset

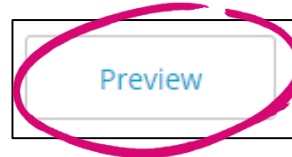

- 1 Click the **Save** button to save your asset once it has been completed. You will also be prompted to save your work at regular intervals.

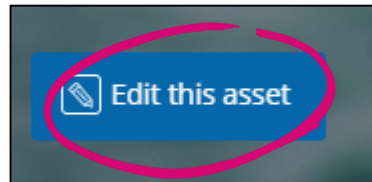

- 2 Enter a title for your portfolio and click on the **Confirm** button.

- 3 Click **Preview** to preview your asset.

- 4 Click **Edit this asset** to continue to work on your asset.

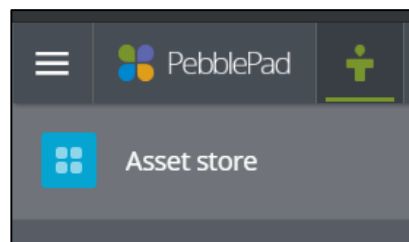

## View your PebblePad assets

- 1 Login into PebblePad and click the '**Burger menu**'.

- 2 Click **Asset store**.

This will show all your saved assets.
